

CONFERENCE DISPLAYS

The Key to a Successful Conference

Our Session Monitors and Message Centers help keep attendees continually informed. These Conference Displays are strategically located throughout the conference venue for high visibility.

Features common to all our Conference Displays:

- **Always Connected** - Connected to a network either wirelessly or via LAN cables, our Conference Displays have access to a constantly updated central database. This ensures that Conference Displays always post the latest information.
- **No Downtime** - Our displays are never down. Even if the network goes down due to cut cables or a server outage, information continues to be displayed without showing any errors. In the background, the display will continually attempt to access the network. Once the network is up again, information is updated and displayed.
- **Sponsor Ad Opportunities** - The displays can be setup to showcase logos of conference sponsors, giving sponsors additional exposure in high visibility areas.
- **Customized** - Customized according to your conference graphics, layout and design, our Conference Displays fit seamlessly into your conference environment.

Our Session Monitors and Message Centers help keep attendees continually informed.

Session Monitors

A Session Monitor displays up-to-the-minute information about sessions taking place in conference rooms at events. Each Session Monitor is connected to the network, automatically accessing a remote database where all of the session information is stored. The database is polled every minute to ensure that any session changes, cancellations, and overflow alerts are displayed immediately for the convenience of the attendee. Session Monitors can be customized, making them portable from event to event.

Message Center

Our Message Center technology enables attendees to receive urgent messages by checking their kiosk e-mail account. This is of great value to attendees when their mobile devices are not receiving a signal while inside the conference venue. The process begins with our providing the phone number of a "message center operator" to registered attendees in their conference materials. The attendee gives this phone number to those with which he/she wishes to stay in touch. When any of these individuals calls into the message center, the operator takes down the message and sends it via e-mail to the conference e-mail account of the attendee. Automatically, the attendee's name is posted on electronic monitors located throughout the conference floor. A note is displayed telling the attendee to check his/her conference e-mail. When the attendee sees his/her name listed, he/she can walk over to the kiosk, log in and check the message. Once the message has been read, the attendee's name is removed from the message board.

Requirements:

- An electronic monitor for each session room
- A network connection to each session display (wireless is possible)
- Conference information stored in electronic format
- A designated staff person to manage updates to the database while on site
- One server for database storage

Requirements:

- An electronic monitor for each desired location in the conference center
- A network connection to each message center display (wireless is possible)
- A kiosk system for message retrieval
- A designated message operator to take messages
