

The Essential On-Site Conference Tool

Networking is one of the most crucial components of trade shows and conferences. Our Kiosks facilitate the networking process by providing tools such as e-mail, meeting schedulers, and attendee and exhibitor directories. Give your attendees the ability to maximize their conference experience using our Kiosks.

- **Customized Interface** - Conference images and branding, along with logos from sponsors can be designed into the Kiosk interface to create a unique experience for your attendees.
- **Personalized and Secure Environment** - Any information that the attendee saves when sending e-mail, creating their own schedule, or using any other feature remains personal and secure because we assign each attendee a unique user ID, password, and a personal conference e-mail account.
- **PDA Connectivity** - To obtain conference information right on their handheld, attendees need only walk up to a Kiosk, connect their PDA, and push one button to synchronize.
- **Exhibitor Locator** - This tool assists attendees in finding out who's exhibiting, where an exhibitor's booth is located, and how to get there. It is one more avenue for exhibitors to use to get their products and services advertised.
- **Online Evaluations** - Electronic evaluations available on the Kiosk are quick and easy for an attendee to fill out, and the results are immediate and quantifiable.
- **Quick and Expert Deployment** - The Kiosk image is prepared well before the conference begins. Once on site, we setup the hardware and deploy the image in just a few hours.
- **Attendee Networking** - The Kiosk can be used to facilitate networking by providing e-mail, an attendee directory, and a meeting-scheduler. Attendees can use these tools to find other attendees and schedule meetings while on site.
- **Up-to-Date Conference Information** - Conference information is always changing and being updated. The Kiosk can be used as the tool for making the latest information available.
- **Session Presentations** - It is very cost-effective to include the presentation files used by session speakers into the Kiosk so that attendees print only the presentations they need before each session.
- **Registration Coordination** - Working closely with your registration company, we obtain up-to-the-minute attendee data before and during the event. This ensures that all of your attendees can readily access the Kiosks and allows us to update the attendee directory.
- **Urgent Messaging** - In conjunction with our Message Center technology, attendees can receive urgent messages by checking their Kiosk e-mail account. This is of great value to attendees when their mobile devices are not receiving a signal while inside the conference venue.
- **Conference Discussions** - Attendees can engage in on-line discussion forums to stimulate feedback about the event, and to discuss conference-related topics.

*Our Kiosks are
the ideal medium
to facilitate
networking.*
